Gentlemen:

In the past we have been favored with inquiries from you concerning our MICRO-FOLIO systems and related equipment.

We have been elated to have had many of you purchase equipment, either from us or from our authorized dealers. We trust that your equipment has performed faithfully and that you have no reservations regarding the quality of Atlantic products.

Now, we wish to alert you to our latest exclusive product (one of the most appropriate items ever introduced to the microfilm industry), the Atlantic Model R Densitometer - a portable, hand held densitometer for use with microfilm and other photo-reprographic applications - at an unheard of price of \$69.50.

Before we introduced the Model R at the Visual Communications Congress show in Detroit, we had our inspection department compare density readings side by side with our \$700.00 laboratory model, every day for three weeks.

The results were amazing - this little densitometer - slightly larger than a cigarette pack - maintained accuracies of Plus or Minus 0.02.

Also:

- Reads transmission densities between 0.60 and 1.40
- Reads base densities below 0.60
- Operates on two self-contained AA mercury batteries that last about one year
- Comes with mylar-encased test density film strip marked with its own density

Hard to believe? We know! But try one and see!!!

Very truly yours,

ATLANTIC MICROFILM CORPORATION
